PATONGA POWER

Patonga Power has invited Pearl Beach to join us as a clean energy community, and your attendance at this very important presentation is encouraged.

Patonga Power is a community energy program developed by Energy Locals and Enosi to unlock the value of community solar energy trading.

Patonga Power will enable us to buy and sell excess solar energy generated by the community in Patonga and Pearl Beach.

The Enosi Powertracer platform enables the community to set our own prices for buying and selling excess energy so solar owners can benefit and households without solar can save on electricity costs too.

HOW PATONGA POWER WORKS

1. All residents who have an electricity account in Patonga Beach or Pearl Beach will be invited to join Energy Locals, Australia's highest rated electricity provider on Product Review. Signing up is easy.
2. The Patonga Beach and Pearl Beach community will be invited to participate in this exclusive Community Solar Program, buying excess solar energy at cheaper rates than standard grid power.
3. Enosi's Powertracer platform will enable the community to trade excess solar energy to reduce cost, improve on solar Feed in Tariffs and retain benefits within the community.
4. As local solar installations grow we can continue to match this clean energy to local consumption and keep the cost and carbon emissions savings in the community.
